

PALOMAR ENERGY PROJECT (01-AFC-24) CEC STAFF DATA REQUEST NUMBER 25	
Technical Area: Cultural Resources	Response Date: April 8, 2002

REQUEST:

Please provide the results of a built environment survey of the project area (within one mile of the project site) and linears (minimum of 100 feet on each side of centerlines) conducted by an architectural historian or an historian with a background in industrial or architectural or public history. Characterize the area, identify and include descriptions of historic cultural resources (buildings, structures, objects, sites, and districts). The survey may be limited to cultural resources that appear to be 45 or more years old or exceptional, unless there is an obvious potential historic resource, not within the specified limit that may be impacted. Ensure the existing transmission lines noted above and Hale Avenue Resource and Recovery Facility (HARRF) are included. Please identify all structures and facilities more than 45 years old (or otherwise exceptional) adjacent to the project footprint.

RESPONSE:

The built-environment survey completed for Planning Area 1 (Historical Architectural Survey for the Escondido Research and Technology Center Specific Plan Area, April 2002) will be submitted within a few days of April 8, 2002. The Historical Archaeologist is awaiting a designation number for a Department of Parks and Recreation 523 form, which will be included under Appendix B of the above-referenced survey.
